

**Link for Grandview Survey**

Please take a few moments to complete the survey below. Your input is needed so that the board can improve the way we communicate with and engage with lot owners. Feel free to reach out to Carrie Pumphrey if you'd like to get more involved or help out with community events. Thank you for your time!

**HOST NEEDED FOR THE “SPRING SOCIAL” IN MAY**

This is a very casual, evening gathering with a pitch-in of appetizers and “bring your own beverage”. It is a popular event with lot owners eager to catch up with one and other after the winter. We also introduce new lot owners. We just need a gathering place. If you prefer to host it outside that is fine and it can be “weather permitting”. You may choose any evening in May.

Please phone or e mail the office if you would consider hosting or have questions about what is involved. 812-342-1219 [gloa@grandviewlake.org](mailto:gloa@grandviewlake.org)

## **LAKE SAFETY—Jason Carroll**

**It's that time of year again. March 10-16, 2024, is Severe Weather Preparedness Week in Indiana.**

At about **10:15 a.m. Eastern on Tuesday, March 12, 2024**, NWS will issue a test tornado warning alert, which will be shared through most notification systems, including the statewide Emergency Alert System (EAS).

Wherever you are at that time, practice your **tornado safety plan**. There will be no follow-up alerts issued by the NWS to mark the end of the statewide tornado drill. It ends when your business, school or family feels that you have adequately practiced your safety procedures.

### **Tornado Safety Tips**

#### **Quick Tips**

- Identify safe places to shelter. For optimal protection, choose basements, storm cellars and inner rooms away from doors, windows and outer walls.
- If you live in a mobile or manufactured home, identify an alternative shelter such as a single-family home, designated tornado shelter or building built with reinforced concrete. Also, find the best route to this shelter and practice how long it takes to get there.
- During tornado warnings, move to the lowest level of a sturdy building. It is best to go to a basement, safe room or storm cellar. If unavailable, use an interior room or hallway without windows.
- Stay out of damaged buildings until they have been inspected and cleared by a building official.
